

CD4519BM/CD4519BC 4-Bit AND/OR Selector

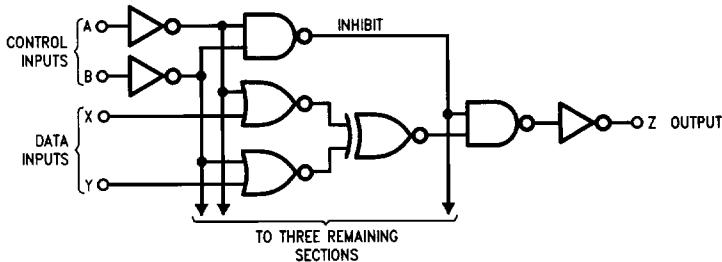

General Description

The CD4519B is a monolithic complementary MOS (CMOS) integrated circuit constructed with N- and P-channel enhancement mode transistors. Depending on the condition of the control inputs, this part provides three functions in one package: a 4-bit AND/OR selector, a quad 2-channel Data Selector, or a Quad Exclusive-NOR Gate. The device outputs have equal source and sink current capabilities and conform to the standard B series output drive and supply voltage ratings.

Features

- Wide supply voltage range 3.0V to 15V
- High noise immunity 0.45 V_{DD} (typ.)
- Low power TTL fan out of 2 driving 74L or 1 driving 74LS compatibility
- 5V-10V-15V parametric ratings
- Symmetrical output characteristics
- Maximum input leakage 1 μ A at 15V over full temperature range
- Second source of Motorola MC14519

*AC Parameters are guaranteed by DC correlated testing.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed; they are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and Electrical Characteristics" provides conditions for actual device operation.

Note 2: V_{SS} = 0V unless otherwise specified.

Note 3: I_{OH} and I_{OL} are tested one output at a time.

Note 4: Capacitance is guaranteed by periodic testing.

Note 5: C_{pd} determines the no load ac power consumption of any CMOS device. For complete explanation, see 54C/74C Family characteristics application note AN-90.
